

## **Description**

A car buffer is a power tool (either plug-in or battery-powered) that applies polishing compounds or wax to a vehicle's paint surface. It helps remove light scratches, swirl marks, and other imperfections, resulting in a glossy, mirrorlike finish.

## **Features**

- Ensure the highest standard of work and efficiency in detailing, polishing, ceramic coats
- To remove small damages as well as scratches on top of cars to give them a new look
- To remove the minor scratches from the vehicle surface
- Repairs or replaces machine parts to maintain the machine in operational condition.
