

## **Description**

Microfibre is a synthetic fabric consisting of ultra-fine fibres. These fibres generally have diameters measuring less than 10 micrometers and have denier weights under 0.7 D. Comparatively, a single strand of silk is around 1 D, making microfibre one of the world's finest forms of textile fibre.

## **Features**

- Microfiber is able to pick up dirt, dust, and even bacteria
- Microfiber cloths can be used wet or dry on any surface in your home
- Microfiber cleans well with just water for a chemical free household
- Pair microfiber cloths with disinfectants or other solvents when desired. If you're interested in microfiber cloths, these are what we'd recommend.
